ALASKA—SECTION 1

General Characteristics

GENERAL

This report constitutes a chapter of Volume I of the Housing reports. Volume I presents basic statistics relating to practically all subjects for which information was collected in the Census of Housing, taken as of April 1, 1950. The dwelling unit is the reporting unit in this volume.

Statistics are presented for the Territory by residence (urban, rural nonfarm, and rural farm) and for the following types of areas within the Territory: judicial divisions, urban places, and places of 1,000 to 2,500 inhabitants.

Characteristics are not shown if the base contains fewer than three dwelling units in order to avoid disclosure of information for individual units.

COMPARABILITY WITH 1939 CENSUS OF HOUSING

In 1939, the scope of the subject matter was limited to data on tenure, number of rooms, rent and value, whereas in the 1950 Census of Housing the coverage was expanded to include information on number of dwelling units in structure, number of persons in household, exterior material, year built, condition and plumbing facilities, electric lighting, kitchen sink, heating equipment and fuel used, and radios. Besides this expansion in scope, there have been several changes in concepts and definitions from the 1939 Census. Changes in definitions and procedures are described in the section on "Definitions and explanations."

HOUSING REPORTS

Five volumes contain the principal findings of the 1950 Census of Housing. Volume I, *General Characteristics*, is the basic publica-

tion. This volume contains data on practically all housing items enumerated in the census, presented as a separate chapter for the United States, each State, the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Each of the chapters is available as a separate bulletin (Series H-A). Volumes II through V of the Housing reports are limited to data for continental United States.

POPULATION REPORTS

The major portion of the information compiled from the 1950 Census of Population appears in Volume II, *Characteristics of the Population*. This volume is available also in three series of bulletins: Series P-A, "Number of Inhabitants"; Series P-B, "General Characteristics"; and Series P-C, "Detailed Characteristics."

AVAILABILITY OF UNPUBLISHED DATA

Practically all of the housing data that were tabulated are published in this report. Unpublished statistics can be made available, however, for the cost of tabulation or reproduction. An estimate of the cost of providing unpublished data will be made upon request to the Director, Bureau of the Census, Washington 25, D. C.

MAP

A map of the Territory showing the outlines of judicial divisions and the location of cities, towns, and villages, is included in this report.

DEFINITIONS AND EXPLANATIONS

URBAN AND RURAL RESIDENCE

In the 1950 Census of Alaska, data have been classified by urban and rural residence for the first time. Urban housing comprises all dwelling units in places of 2,500 inhabitants or more. The remaining dwelling units are classified as rural. The rural classification thus comprises a variety of residences which range from isolated homes in the open country to dwelling units in places having nearly 2,500 inhabitants.

Although housing data were not classified by urban-rural residence in 1939, the 1950 definition has been applied to the 1939 data to provide the comparable figures shown in table 2.

PLACE

The term "place" refers to a concentration of population regardless of legally prescribed limits, powers, or functions. All incorporated places and a number of unincorporated places of settlement were enumerated separately.

FARM AND NONFARM RESIDENCE

In the 1950 Census, the enumerators were instructed to base the farm-nonfarm classification of a dwelling unit on the respondent's answer to the question, "Is this house on a farm?" Dwelling units located on farm land for which a cash rent was paid for house and

yard only and dwelling units on institutional grounds and in summer camps and tourists courts were classified as nonfarm, regardless of the answer to this question.

Urban-farm dwelling units are dwelling units on farms within the boundaries of urban areas. In rural areas, dwelling units are classified into rural-farm units which comprise all dwelling units on farms, and rural-nonfarm units which are the remaining rural units. In Alaska, virtually all farm housing is in rural areas. Therefore, in this report only the rural dwelling units have been subdivided into farm and nonfarm categories.

DWELLING UNIT

In general, a dwelling unit is a group of rooms or a single room occupied, or intended for occupancy, as separate living quarters by a family or other group of persons living together or by a person living alone.

Ordinarily, a dwelling unit is a house, an apartment, or a flat. A dwelling unit may be located in a structure devoted to business or other nonresidential use, such as quarters in a warehouse where the watchman lives or a merchant's quarters in back of his shop. Trailers, boats, tents, and railroad cars, when occupied as living quarters, are included in the dwelling unit inventory.

A group of rooms, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or a separate entrance. A single room, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or if it constitutes the only living quarters in the structure. Each apartment in a regular apartment house is a dwelling unit even though it may not have separate cooking equipment. Apartments in residential hotels are dwelling units if they have separate cooking equipment or consist of two rooms or more.

Living quarters of the following types are not included in the dwelling unit inventory: rooming houses with five lodgers or more, transient accommodations (tourist courts, hotels, etc., predominantly for transients), and barracks for workers (railroad, construction, etc.). Living quarters in institutions (for delinquent or dependent children, for handicapped persons, for the aged, for prisoners, etc.), general hospitals, and military installations are likewise excluded from the dwelling unit inventory except for dwelling units in buildings containing only family quarters for staff members.

The count of occupied dwelling units in the 1950 Census may be considered comparable with the count in the 1939 Census. Even though some living quarters were classified as separate dwelling units by one definition and not by the other, the over-all effect of these differences is believed to be small. In the 1939 Census, a dwelling unit was defined as the living quarters occupied by one household. A household consisted of a family or other group of persons living together with common housekeeping arrangements, or a person living entirely alone. The enumerator was not explicitly instructed to define living quarters as dwelling units on the basis of cooking equipment or separate entrance. Further, in 1939, living quarters with five lodgers or more were tabulated as dwelling units, whereas in 1950 such living quarters were not included in the dwelling unit count.

OCCUPANCY CHARACTERISTICS

Occupied dwelling units.—A dwelling unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, as for example, on vacation. However, a dwelling unit occupied at the time of enumeration by nonresidents is not classified as occupied but as a "nonresident" dwelling unit.

Occupied dwelling units and households.—A household consists of those persons who live in a dwelling unit; by definition, therefore, the count of occupied dwelling units is the same as the count of households. However, there may be small differ-

ences between these counts in the Housing and the Population reports because the data were processed independently.

Population in dwelling units.—The count of the population in dwelling units represents the population in living quarters which were classified as dwelling units and therefore excludes the population in institutions and other quasi households. This count was used in computing the 1950 "population per occupied dwelling unit." For 1939, however, population per occupied dwelling unit was obtained by dividing the total population by the number of occupied dwelling units. Thus, the 1950 and 1939 figures for population per occupied dwelling unit are not strictly comparable. The differences are negligible, however, except in those areas where there is an appreciable resident population in institutions, large rooming houses, dormitories, or other quarters not classified as dwelling units.

Tenure.—A dwelling unit is "owner-occupied" if the owner was one of the persons living in the unit even if the dwelling unit was not fully paid for or had a mortgage on it. When the owner of the unit was a member of the household but was temporarily away from home, as in the case of military service or temporary employment away from home, the unit was still classified as "owner-occupied."

All occupied dwelling units that are not "owner-occupied" were classified as "renter-occupied" whether or not any money rent was paid for the living quarters. Rent-free units and units received in payment for services performed are classified as rent-free and included with the renter-occupied units.

Race of occupants.—The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. Persons who are a mixture of white and any other race are classified according to the race of the nonwhite parent. Mixtures of nonwhite races are classified according to the race of the father. In general, separate statistics are given in this bulletin for households in which the head of the household is white or nonwhite. In table 1, heads of nonwhite households are further classified as being of "aboriginal stock" or "other races."

Number of persons.—All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the dwelling unit. Lodgers, foster children, wards, and resident employees who share the living quarters of the household head are included in the household in addition to family members.

The median number of persons per occupied dwelling unit is the theoretical value which divides the dwelling units equally, one-half having more persons and one-half having fewer persons than the median. In the computation of the median, a continuous distribution was assumed. For example, when the median is in the 3-person group, the lower and upper limits of the group were assumed to be 2.5 and 3.5, respectively.

Persons per room.—The number of persons per room was computed by dividing the number of persons by the number of rooms in the dwelling unit. The ratio was computed separately for each occupied dwelling unit.

Nonresident dwelling units.—A nonresident dwelling unit is a unit which is occupied temporarily by persons who usually live elsewhere. Nonresident units are not included with occupied dwelling units. They are presented as a separate group in tables 1 and 14 and included with vacant units in the remaining tables.

Vacant dwelling units.—A dwelling unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant dwelling units were included if they were intended for occupancy as living quarters. New units not yet occupied were enumerated as vacant dwelling units if construction had proceeded to the extent that all the exterior windows and doors were installed and final usable floors were in place. Otherwise, potential units under construction were not enumerated. Vacancy data were not collected in 1939.

Seasonal and nonseasonal vacant units.—Vacant dwelling units not suitable for year-round occupancy have been classified as seasonal. Nonseasonal vacant dwelling units are those which are so constructed as to provide adequate protection from the elements during all seasons of the year and have suitable heating facilities for the winter months.

Nonseasonal not dilapidated vacant units, for rent or sale (available vacant units).—This category provides a measure of the dwelling units on the housing market in April 1950. It does not include

any dilapidated or seasonal vacant units or vacant units held off the market for a variety of reasons.

The category "For rent" consists of vacant units offered for rent as well as those being offered for rent and for sale. The "for sale" group is limited to those for sale only. "Not for rent or sale" includes units already rented or sold but not yet occupied, and units being held off the market for other reasons.

STRUCTURAL CHARACTERISTICS

Number of dwelling units in structure.—A structure either stands by itself with open space on all sides or has vertical walls dividing it from all other structures. The statistics are based on the number of units classified by the number of dwelling units in the structure in which they are located rather than on the number of residential structures.

Since the number of structures with business is small, these were not distinguished from structures without business.

Number of rooms.—All rooms which are used, or are suitable for use, as living quarters are counted in determining the number of rooms in the dwelling unit. Included are kitchens, bedrooms, dining rooms, living rooms, and permanently enclosed sunporches of substantial size; finished basement or attic rooms, recreation rooms, or other rooms used or suitable for use as living quarters; and rooms used for office purposes by a person living in the dwelling unit. A kitchenette or "half-room" which is partitioned off from floor to ceiling is counted as a separate room, but a combined kitchenette and dinette separated only by shelves or cabinets is counted as only one room. Not counted as rooms are bathrooms, strip or pullman kitchens, halls or foyers, alcoves, pantries, laundries, closets or storage space, unused basement or attic rooms not suitable for living quarters, and rooms subleased for office or business purposes by a person or persons not living in the dwelling unit.

Year built.—The year the structure was built refers to the year in which the original construction was completed, not to the year in which any later remodeling, addition, reconstruction, or conversion may have taken place. "Year built" statistics are based on dwelling units classified by the date of the original construction of the structure in which they are located. The figures do not represent the number of dwelling units added to the inventory during a given period. They represent the number of units constructed during a given period plus the number created by conversion in structures originally built during the same period, minus the number destroyed in structures built during the period. Losses occur through demolition, fire, flood, disaster, and conversion to nonresidential use or to fewer dwelling units.

Exterior material.—The principal material used for the exterior walls of a structure is classified as "wood," "masonry," "mud or earth," and "other." Subcategories indicate whether "wood" structures are made of "clapboard" or "log." Combination finishes are classified according to the material which covers the major part of the outside wall. Statistics are based on the number of dwelling units classified by the type of material used for the structure in which they are located, rather than on the number of residential structures.

CONDITION AND PLUMBING FACILITIES

Condition and plumbing facilities as a combined item.—Both the condition of a dwelling unit and the type of plumbing facilities are considered measures of the quality of housing. These items have been combined into categories representing various levels of housing quality, ranging from the most desirable to the least desirable as measured by condition and plumbing facilities. Such comprehensive categories provide a more practical means of evaluating quality than is possible by the use of the individual items. The statistics on the combination of condition and plumbing facilities are limited to dwelling units for which reports were made on all items.

The category "With private toilet and bath" includes those dwelling units with both a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. "With running water, lacking private toilet or bath" includes those dwelling units having running water in the structure, but lacking a private flush toilet or lacking a private bathtub or shower. "No running water" includes units with only piped running water outside the structure or with only other sources of water supply, such as a hand pump.

In table 20, the category "No private bath or dilapidated" includes, in addition to the category "No running water or dilapidated," all dwelling units that are not dilapidated and have running water, but lack a private flush toilet or private bathing facilities.

Condition.—To measure condition, dwelling units were classified as "not dilapidated" or "dilapidated." A dwelling unit was reported as dilapidated when it had serious deficiencies, was run-down or neglected, or was of inadequate original construction, so that it did not provide adequate shelter or protection against the elements or endangered the safety of the occupants. A dwelling unit was reported as dilapidated if, because of either deterioration or inadequate original construction, it was below the generally accepted minimum standard for housing and should be torn down or extensively repaired or rebuilt.

The enumerator determined the condition of the dwelling unit on the basis of his own observation. He was instructed to appraise the condition of units uniformly, regardless of neighborhood or race of occupant. The enumerator was provided with detailed written instructions and with pictures illustrating the concepts "deterioration" and "inadequate original construction."

The types of deficiencies used in determining condition relate to weather tightness, extent of disrepair, hazards to safety, and inadequate or makeshift construction. Deficiencies which could be revealed only by an engineering survey, or such deficiencies as inadequate light or ventilation, or the presence of dampness or infestation, were not included among the criteria for determining condition of a dwelling unit.

Specifically, a dwelling unit was to be reported as dilapidated if—

1. It had one or more critical deficiencies, as for example:
 - a. Holes, open cracks, rotted, loose, or missing materials over a considerable area of the foundation, outside walls, roof, or inside walls, floors, or ceilings.
 - b. Substantial sagging of floors, walls, or roof.
 - c. Extensive damage by storm, flood, or fire.
2. It had a combination of minor deficiencies which were present in sufficient number and extent to give evidence that the unit did not provide adequate shelter or protection against the elements or was physically unsafe. Examples of these deficiencies are—
 - a. Holes, open cracks, rotted, loose, or missing materials over a small area.
 - b. Shaky or unsafe porch, steps, or railings.
 - c. Broken or missing window panes.
 - d. Rotted or loose window frames which are no longer rain-proof or windproof.
 - e. Damaged, unsafe, or makeshift chimney.
 - f. Broken, loose, or missing inside stair treads or risers, balusters, or railings.
 - g. Deep wear on doorsills, doorframes, outside or inside steps, or floors.
3. It was of inadequate original construction. Examples of inadequate original construction are—
 - a. Makeshift walls
 - b. Lack of foundation
 - c. Dirt floors
 - d. Inadequately converted cellars, garages, barns, and similar places.

Although the enumerator was provided with detailed oral and written instructions and with visual aids, it was not possible to eliminate completely the element of judgment in the enumeration of this item. There is evidence that some enumerators obtained

too large or too small a count of dilapidated units. Consequently, data on condition for small areas, which depend on the work of one or two enumerators, are subject to a wider margin of error than is to be expected for larger areas, where the data represent the returns made by several enumerators.

Water supply.—A dwelling unit has "piped running water" if water is piped to it from a pressure or gravity system. "No piped running water" includes water from a hand pump or from a well or stream, where no piped running water is available.

Toilet facilities.—A dwelling unit is reported as having a flush toilet if the toilet is inside the structure and is operated by means of water piped to it. A flush toilet for exclusive use is differentiated from one that is shared.

Bathing facilities.—A dwelling unit has a bathtub or shower if either type of equipment, supplied with piped running water (not necessarily hot water), is available inside the structure for the use of the occupants of the dwelling unit. An installed bathtub or shower located outside the structure was enumerated as "no bathtub or shower." Bathing facilities inside the structure for exclusive use are differentiated from facilities that are shared.

Exclusive or shared use.—Facilities are for exclusive use when the occupants of only one dwelling unit use them. If there are lodgers in the dwelling unit who also use the facilities, the facilities are still reported as for the exclusive use of occupants of the dwelling unit, provided that they are not used by occupants of another dwelling unit. Facilities are shared when occupants of two or more dwelling units use the same facilities. Also, facilities are shared if they would be used by the occupants of a unit now vacant, if that unit were occupied.

Inside the structure.—Facilities or equipment are considered "inside the structure" if they are located within the dwelling unit or elsewhere in the structure, such as in a common hallway, or in a room used by occupants of several dwelling units. Facilities or equipment on an open porch are considered to be outside the structure. Those located in an enclosed porch are considered to be inside the structure, even though it may be necessary to go outside the structure to reach them.

EQUIPMENT AND FUEL

Electric lighting.—A dwelling unit is reported as "with electric lights" if it is wired for electric lights, even though service may have been temporarily suspended at the time of enumeration.

Heating equipment.—Heating equipment represents the equipment available for heating the dwelling unit during the winter months. A usable heating system or furnace was reported even though it may have been temporarily out of order or not in operation at the time of enumeration.

Central heating equipment comprises the categories "Piped steam or hot water" and "Warm air furnace." Other means of heating, with or without flue, are considered to be noncentral heating.

The number of units with central heating equipment is somewhat larger than the number of central heating installations. The majority of multi-unit structures have only one central heating system to service all of the units in the structure.

"Piped steam or hot water" includes radiant, panel, and base-board heating systems, as well as radiation. "Warm air furnace" includes piped and pipeless warm air furnaces, as well as floor and wall furnaces. "Other means with flue" includes fireplaces and flue-connected heating stoves. A flue is a pipe or enclosed passage, either connected to a chimney or leading directly to the outside of the structure, which carries the smoke or fumes to the outside. All other types of heating equipment, such as electric heaters and portable kerosene heaters, are included in the category "Other means without flue." Stoves and ranges used primarily for cooking were enumerated as heating equipment when they were also the major source of heating.

Heating fuel.—Where more than one heating fuel was used in a dwelling unit, the fuel used most for heating was reported. Statistics for heating fuel are presented separately for units with central heating and with noncentral heating.

The category "Liquid fuel" includes fuel oil, furnace oil, distillate oil, kerosene, coal oil, stove oil, range oil, lamp oil, gasoline, and alcohol. "Other fuel" includes utility or bottled gas and any other fuels not shown as a separate category.

Kitchen sink.—A dwelling unit is reported as "with kitchen sink" if a sink, located within the structure and with a drainpipe leading to the outside, is available for use by occupants of the unit. The sink need not have running water piped to it.

Usually, the sink is located in the kitchen, but a sink located in a hall, pantry, enclosed porch, or a room adjacent to the kitchen, if used in the washing of dishes or cooking utensils, is considered a "kitchen sink." However, a sink located on an open porch or a washbowl, basin or lavatory located in a bathroom or bedroom is not a "kitchen sink."

Radio.—Data on radio represent the number of dwelling units which have a radio, even though the set was temporarily out of order or being repaired at the time of enumeration. The data do not represent the total number of radios in dwelling units because some dwelling units may have two or more sets.

FINANCIAL CHARACTERISTICS

Contract monthly rent.—Contract monthly rent is the rent at the time of enumeration contracted for by the renter, regardless of whether it includes furniture, heating fuel, electricity, cooking fuel, water, or other services sometimes supplied. Data are limited to nonfarm units. Rental amounts were reported to the nearest dollar.

The contract monthly rent data for renter-occupied units are considered roughly comparable for the 1950 and the 1939 Censuses, except that in 1950 no dollar estimates were made for rent-free units, whereas in 1939 estimates made for rent-free units were included in the distribution of renter units. Furthermore, in 1939 data on contract monthly rent were obtained for farm units.

The median contract monthly rent of the dwelling units is the rent which divides the series into two equal parts, one-half of the units with rents higher than the median and the other half with rents lower than the median. In the computation of the median, the limits of the class intervals were assumed to stand at the midpoint of the 1-dollar interval between the end of one of the rent groups and the beginning of the next. For example, the limits of the interval designated \$10 to \$14 were assumed to be \$9.50 and \$14.50. All medians were computed on the basis of the tabulation groups in full detail as shown in the tables for larger areas.

The average contract monthly rent instead of the median is presented in this report for places of 1,000 to 2,500 inhabitants. The average is the quotient of the sum of the rents divided by the number of dwelling units reporting.

Value of one-dwelling-unit structures.—Value represents the amount for which the owner-occupant estimates that the property (including the land) would sell under ordinary conditions and not at forced sale. Value data are limited to nonfarm units in 1-dwelling-unit structures and include values reported for such owner-occupied dwelling units as trailers, boats, and tents.

In 1939, the value data were presented for all owner-occupied units in both multi-dwelling-unit structures and 1-dwelling-unit structures. If the owner occupied one of the dwelling units in a structure containing two or more dwelling units, or if a part of the structure was used for business purposes, the value reported in 1939 represented only that portion occupied by the owner and his household. Thus, the data on value of owner-occupied units are not strictly comparable for the two censuses because of differences in the types of units for which value was reported.

The median value of the dwelling units is the value which divides the series into two equal parts, one-half of the units with values higher than the median and the other half with values lower than the median. In computing the median, the limits of the class interval were assumed to stand at the beginning and end of the value group as shown in the tables. All medians were computed on the basis of the tabulation groups in full detail as

shown in the tables for larger areas. In rare instances where the median is located in the lowest tabulation group, less than \$500, the median is indicated as -\$500.

The average value instead of the median is presented in this report for places of 1,000 to 2,500 inhabitants. The average is the quotient of the sum of the values divided by the number of dwelling units reporting value.

RELIABILITY OF DATA

Users of data for the smaller areas should bear in mind that the data for such areas represent the work of a very small number of enumerators (often only one or two). The misinterpretation by an enumerator of the instructions for a particular item may,

therefore, have an appreciable effect on the statistics for a small community, even though it would have a negligible effect upon the figures for a large area.

Table 1.—OCCUPANCY, TENURE, AND RACE OF OCCUPANTS, FOR ALASKA, URBAN AND RURAL: 1950
